

My data is about floods in central Texas.

We picked our data because someone from our table was from central Texas. Someone would be interested in this data because it's a big event.

I know that data is credible because it's from the Texas Water Development Board. Texas Water Development Board. (2025). Statewide reservoir summary. Water Data for Texas. <https://waterdatafortexas.org/reservoirs/statewide>

My four go-to columns are reservoir percent full (how full is the reservoir), water level (level of water in feet), surface area (how many acres of surface area), and reservoir storage (how much storage area in feet)
